

Release Note

Edgecore EAP111 Release v12.4.7

Document # EAP111_v12.4.7-760-88f0fd8f-fcceb6e

Enhancement from v12.4.1-478-6c9597c1-3aa904

Table of Contents

1 Feature.....	3
1.1 Support MQTT server.....	3
2 Issue Fixed	4
2.1 Unable to associate when more than 3 SSIDs are created, and cannot obtain an IP address in "Router to Internet"	4
3 Known Issue.....	5
3.1 The broadcast rate only works in the basic rate.	5

1 Feature

1.1 Support MQTT server

BLE Probe Req. Data Push

Publish MQTT

Topic

Host

Port

Client ID

User Name

Password

Support MQTT server on the System > Services page. The BLE scan result will be sent to the MQTT server every 30 seconds if the MQTT server is enabled.

1. BLE Probe Req. Data Push: Enable or disable BLE probe request.
2. Publish MQTT: Enable or disable pushing data to the MQTT server.
3. Topic: Text field for the MQTT topic.
4. Host: Text field for a valid IP address or hostname of the MQTT server.
5. Port: Range 0-65535, MQTT port number.
6. Client ID: Text field for the broker's client ID.
7. User Name: Text field for the MQTT authentication username.
8. Password: Text field for the MQTT authentication password.

2 Issue Fixed

2.1 Unable to associate when more than 3 SSIDs are created, and cannot obtain an IP address in "Router to Internet".

When more than 3 SSIDs are created, client devices such as cell phones or iPads cannot associate with the "Router to Internet" SSIDs, preventing normal connectivity. In this version, the issue has been resolved.

3 Known Issue

3.1 The broadcast rate only works in the basic rate.
