Release Notes
MLTG-360

Version: 1.3.3-2646-72c8e391
Enhanced from version 1.3.0-02617-7ca9063c

Table of Content

1. Issue Fixed

- System time can be synchronized with the NTP server successfully via management port or via IPv4 control plane now.
- Fixed an issue that DN might stop sending IPv6 Router Advertisement (RA) to neighbor nodes unexpectedly. This fix further prevent a DN becoming unreachable when the 60GHz link is still connected.
- Enhance the efficiency of the auto recovery mechanism of VXLAN tunnel. This enhancement shortens the network interruption period greatly.
- Management port settings can be successfully reset when reset to default is triggered with boot retries.
- Removed less informative contents in the diagnostic file. The size of the diagnostic file is reduced to prevent potential download issue.

2. Known Issue

- Sometimes node name and link name will be empty in topology dashboard.
- If the links are disconnected and recovered frequently, network function may crash.
