1 Feature Enhancement

1.1 Support Dual Configuration

In the previous version, if the primary configuration stored in the AP is corrupted, the AP will reset to the default value. In this version, a dual configuration is implemented. If the primary configuration is corrupted, the AP will restore the backup configuration stored in the AP to avoid resetting to the default value.

2 Compatible Version for AP Management

Compatible with EWS series v3.91.0000 and above.
