

## **Release Note**

**Edgecore EAP101 Release v11.5.0**

**Document # EAP101-v11.5.0-1175-b0f6e6d5**

Enhancement from v11.4.0-1087-0cfe02d8

## Table of Contents

<b>1</b>	<b>Feature.....</b>	<b>3</b>
1.1	Client Mode.....	3
1.2	Site Survey.....	3
1.3	Custom LAN .....	4
1.4	BSS Coloring .....	5
1.5	TWT .....	6
1.6	OFDMA.....	7
1.7	WME .....	7
<b>2</b>	<b>Issue Fixed .....</b>	<b>9</b>
2.1	The MAC address format is not correct for some SNMP OID .....	9
2.2	The missing client information in edgecoreAPStaVlanId .....	9
2.3	iPhone11 or newer iPhone can't connect to the SSID with "WPA3-Enterprise" or "WPA3-Enterprise Transition" .....	9
2.4	Minimum signal allowed doesn't work normally .....	9
<b>3</b>	<b>Known issue.....</b>	<b>10</b>
3.1	The connection of specific Microsoft surface devices is unstable using WPA2-PSK SSID .....	10
3.2	The SSID compatible issue in Windows 10 devices with the specific ethernet card .....	10
3.3	DFS channel can't be used when establishing mesh link .....	10
3.4	Firewall rule is not working if destination is set to "Any" .....	10
3.5	The throughput of mesh link decreases after reboot or reconfiguration .....	10
3.6	IOS devices are not able to get IP address when connecting to the SSID on client mode AP .....	10
3.7	Custom LAN can't work on the mesh link .....	10
3.8	Client mode AP can't associate to the SSID in custom LAN .....	10
<b>4</b>	<b>Compatible Version for AP Management .....</b>	<b>12</b>

# 1 Feature

## 1.1 Client Mode

**PHYSICAL RADIO SETTINGS**

Status  ON

Mode

802.11 Mode

Support Client mode on the Radio 5/2.4 GHz page of Wireless.

The following items are displayed on this page:

1. Mode — Add client option. Client mode AP can connect to another AP which is set to Access Point (Auto-WDS) to establish wireless link. Clients can connect to the internet with the SSID of client mode AP.

## 1.2 Site Survey

**WIRELESS NETWORKS**

[+ Add](#)

EAP101-EC2038000720 (SSID1) EC2038000720 (SSID2)

**GENERAL SETTINGS**

Status  ON

SSID   Site Survey  Broadcast

Local Configurable  OFF

Client Isolation  OFF

WMM  ON

Max Clients

Idle Timeout (sec)

Multicast/Broadcast Rate

Support Site Survey on the Radio 5GHz/2.4GHz of the wireless page.

The following items are displayed on this page:

1. Site Survey — Start the site survey feature. The device will scan other SSIDs on the same radio. The result displays in the following.

Note that if the Radio 5GHz is working on DFS channel, there may be no scan results.

**WIRELESS SCAN** Scan Now ✕

*Warning: If the current Channel list consists of DFS channels, there may be no scan results*

SSID/BSSID	Channel	Signal	Security
IgniteNet1-1 28:76:10:03:BF:78	1	-31 dBm	Open
5A-tanya-spw2m-2G-1 28:76:10:25:C7:82	1	-21 dBm	Open
<i>hidden</i> 8A:8E:A1:52:38:37	1	-60 dBm	WPA2 PSK (CCMP)
EAP-QACY-2G-Roaming 32:EF:B6:AF:49:65	1	-47 dBm	WPA2 PSK (CCMP)
PM-24:6f:28:d8:7d:f0	1	-64 dBm	mixed WPA/WPA2 PSK (TKIP, CCMP)

### 1.3 Custom LAN

custom\_0 ON ✔ ✖

IP Address: 192.168.5.1    DHCP Server: **ON** ✔    STP: **OFF** ✖

Subnet Mask: 255.255.255.0    DHCP Start: 100    Smart Isolation: Disable (full access)

MTU Size: 1500    DHCP Limit: 150

DHCP Lease Time: 12hr

Custom DHCP DNS Servers:

[+ Add Custom LAN](#)

Support Custom LAN on the LAN Settings page of Network.

The following items are displayed on this page:

1. Custom LAN — Add one or more custom LAN.

## NETWORK SETTINGS

Network Behavior	Route to Internet	▼
Network Name	custom_0	▼
CAPWAP Tunnel Interface	Disable	▼
Limit Upload	<input type="checkbox"/> OFF	
Limit Download	<input type="checkbox"/> OFF	
Authentication	<input type="checkbox"/> OFF	

If the custom LAN is added, this custom LAN can be used in the Route to Internet on the wireless 2.4GHz and 5GHz page.

## 1.4 BSS Coloring

### Wireless Settings(Radio 5 GHz)

#### PHYSICAL RADIO SETTINGS

Status	<input checked="" type="checkbox"/> ON	✓
Mode	Access Point (Auto-WDS)	▼
802.11 Mode	802.11ax	▼
Channel Bandwidth	40MHz	▼
Channel	Auto	
WME Configure	Configure	
Beacon Interval	100	
Minimum signal allowed	0	?
BSS coloring	64	?
OFDMA	<input checked="" type="checkbox"/> ON	✓
Target Wake Time	<input type="checkbox"/> OFF	

Support BSS coloring on the Radio 5GHz/2.4GHz of the wireless page.

The following items are displayed on this page:

- 1 BSS coloring — Enables or disables BSS coloring feature in 802.11ax mode.
  - 1.1 0: Disable BSS coloring
  - 1.2 1-63: Pre-defined color
  - 1.3 64: Random color

## 1.5 TWT

### Wireless Settings(Radio 5 GHz)

PHYSICAL RADIO SETTINGS

Status	<input checked="" type="checkbox"/> ON
Mode	Access Point (Auto-WDS) ▼
802.11 Mode	802.11ax ▼
Channel Bandwidth	40MHz ▼
Channel	Auto
WME Configure	Configure
Beacon Interval	100
Minimum signal allowed	0 ?
BSS coloring	64 ?
OFDMA	<input checked="" type="checkbox"/> ON
Target Wake Time	<input type="checkbox"/> OFF

Support Target Wake Time on the Radio 5GHz/2.4GHz of the wireless page.

The following items are displayed on this page:

- 1 Target Wake Time — Enables or disables TWT feature in 802.11ax mode.

## 1.6 OFDMA

### Wireless Settings(Radio 5 GHz)

#### PHYSICAL RADIO SETTINGS

Status  ON

Mode

802.11 Mode

Channel Bandwidth

Channel

WME Configure

Beacon Interval

Minimum signal allowed  ?

BSS coloring  ?

OFDMA  ON

Target Wake Time  OFF

Support OFDMA on the Radio 5GHz/2.4GHz of the wireless page.

The following items are displayed on this page:

- 1 OFDMA — Enables OFDMA feature by default in 802.11ax mode.

## 1.7 WME

### Wireless Settings(Radio 5 GHz)

#### PHYSICAL RADIO SETTINGS

Status  ON

Mode

802.11 Mode

Channel Bandwidth

Channel

WME Configure

Beacon Interval

Minimum signal allowed  ?

BSS coloring  ?

OFDMA  OFF

Target Wake Time  OFF

Support WME on the Radio 5GHz/2.4GHz of the wireless page.

The following items are displayed on this page:

- 1 WME configure — Edit WME configuration.

### WME CONFIGURATION ✕

Access Category	AP				Client			
	CW Min	CW Max	AIFS	TXOP Limit	CW Min	CW Max	AIFS	TXO
BestEffort	<input type="text" value="4"/>	<input type="text" value="6"/>	<input type="text" value="5"/>	<input type="text" value="8192"/>	<input type="text" value="4"/>	<input type="text" value="10"/>	<input type="text" value="3"/>	<input type="text" value="4096"/>

Video	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

## **2 Issue Fixed**

### **2.1 The MAC address format is not correct for some SNMP OID**

The MAC address format in edgecoreAPStaMACAddress & edgecoreAPStaSSIDMacAddress is "Hex-String" which is not same as the previous ECW-series product. The correct format is STRING. e.g. STRING: "40:40:a6:91:bc:be".

### **2.2 The missing client information in edgecoreAPStaVlanId**

When multiple devices associate to the EAP101 SSID, the number of edgecoreAPStaVlanId doesn't match the devices. This issue has been resolved in this version.

### **2.3 iPhone11 or newer iPhone can't connect to the SSID with "WPA3-Enterprise" or "WPA3-Enterprise Transition"**

If the SSID is set to "WPA3-Enterprise" or "WPA3-Enterprise Transition", iPhone11 or newer iPhone can't connect successfully. This issue has been resolved in this version.

Note that Windows10 devices can't select "WPA3-Enterprise" option due to the Windows10 software issue, therefore, Windows10 devices can't connect to the SSID with "WPA3-Enterprise".

### **2.4 Minimum signal allowed doesn't work normally**

### 3 Known issue

#### 3.1 The connection of specific Microsoft surface devices is unstable using WPA2-PSK SSID

If the 5Ghz SSID is set to WPA2-PSK SSID, the connection of some Microsoft surface devices is unstable.

#### 3.2 The SSID compatible issue in Windows 10 devices with the specific ethernet card

Using Intel AX200 (old version) or Realtek RTL8822BE with Windows 10 devices, the connection of the devices is unstable connecting to the SSID.

Note that there is no connection issue if the driver of Intel AX200 is updated to 22.60.0.6 or later version.

#### 3.3 DFS channel can't be used when establishing mesh link

If DFS channel is used, mesh link can't be established successfully.

#### 3.4 Firewall rule is not working if destination is set to "Any"

#### 3.5 The throughput of mesh link decreases after reboot or reconfiguration

In mesh topology, after AP reboots or reconfigure the wireless configuration, the throughput of mesh link will decrease.

#### 3.6 IOS devices are not able to get IP address when connecting to the SSID on client mode AP

Client mode AP is associated to the SSID of AP. IOS devices can't get the IP address from the 2.4Ghz SSID with bridge to internet in client mode AP.

#### 3.7 Custom LAN can't work on the mesh link

Set the mesh network behavior of AP1 to route to internet with custom LAN and establish the mesh link with AP2. AP2 can't get the correct IP address from AP1.

#### 3.8 Client mode AP can't associate to the SSID in custom LAN

AP1 SSID sets to route to internet with custom LAN. Client mode AP can't associated to the

SSID of AP1.

## **4 Compatible Version for AP Management**

Compatible with ecCLOUD

Compatible with EWS5203 v3.50.0000 or later
