## 1 Issue Fixed

### 1.1 Hotspot captive portal does not pop up when client connects to the SSID.

When a client connects to an SSID configured with Hotspot captive portal, the captive portal page does not automatically pop up on the client device. The client connects to the SSID successfully but is not redirected to the login or splash page, preventing guest authentication from completing. In this version, the issue has been resolved.

## **2 Known Issue**

**2.1** CPU usage may occasionally spike to high levels.

### **3 Compatible Version for AP Management**

Compatible with ecCLOUD
