Table of Content

1. Issue Fixed	2
2. Known Issue	2

1. Issue Fixed

- Fix an issue that the VXLAN tunnel will be unstable sometimes due to script error. This fix also ensures the throughput test under VXLAN tunnel can be run smoothly and stably.
- Fix an issue that sometimes cloud management daemon will not be enabled automatically after connecting with cloud-managed POP.
- Correct some wording in the GUI and warning messages.
- Fix an issue that the cloud management daemon may crash when initialization.
- Fix an issue that when upgrading MLTG-CN LR from ecCLOUD, the upgrade task would fail or stuck in running state even if the upgrade is done on the device.

2. Known Issue

- Sometimes existing link is not shown on the link status page.
- In Point-to-point mode, after deleting Peer MAC address, the link will not be associated until manually rebooting the unit.
